

Creative edging to improve urban spaces

Contrast Freestyle™

A flexible and EPD-certified modular system

Contrast Freestyle™ is a lot more than just an edging system! This innovative solution allows you to shape beautiful perspectives in urban landscapes and create green spaces that invite people to linger and enjoy.

With **Contrast Freestyle™**, you set the boundaries. Developed to help you realize your vision, the system offers adjustable heights, thicknesses, and colors to fit your design. A range of options and accessories also enables you to tailor a solution precisely suited to your project.

Simply sketch out your project and share the details with us. We'll provide a complete drawing and produce a solution that meets all your needs and desires.

Variable heights for greater flexibility

With **Contrast Freestyle™**, you can design your planters with variable heights of up to 1200 mm.

Made of steel, the edges are available with five different surface treatments. The thickness ranges from 3-8 mm, increasing along with the height.

Example of variable heights

500 mm

750 mm

Max. height of 1200 mm

Integrated furniture and lighting

This system allows for the integration of custom-designed street furniture, adding recreational value to landscape projects. By creating an inviting urban space that encourages people to relax and socialize, vibrant city life emerges naturally.

Our bench series is fully customizable to your specifications, with options for backrests and various slat types and finishes. You can even design your own wood cladding if desired. Lighting can also be installed along the edges to keep the spaces inviting after dark

Ideal for green rooftop spaces

Contrast Freestyle™ can be integrated with the **Upland™** terrace system, which is specially designed for balconies and rooftop terraces.

Built on a base of tile pedestals and aluminum joists, the system also accommodates raised planters. Access to the sub-roof remains intact, allowing hidden installations to be stored under the decking.

Upland™ is available with either wood or tile decking. Benches can be designed with matching wood for a cohesive look.

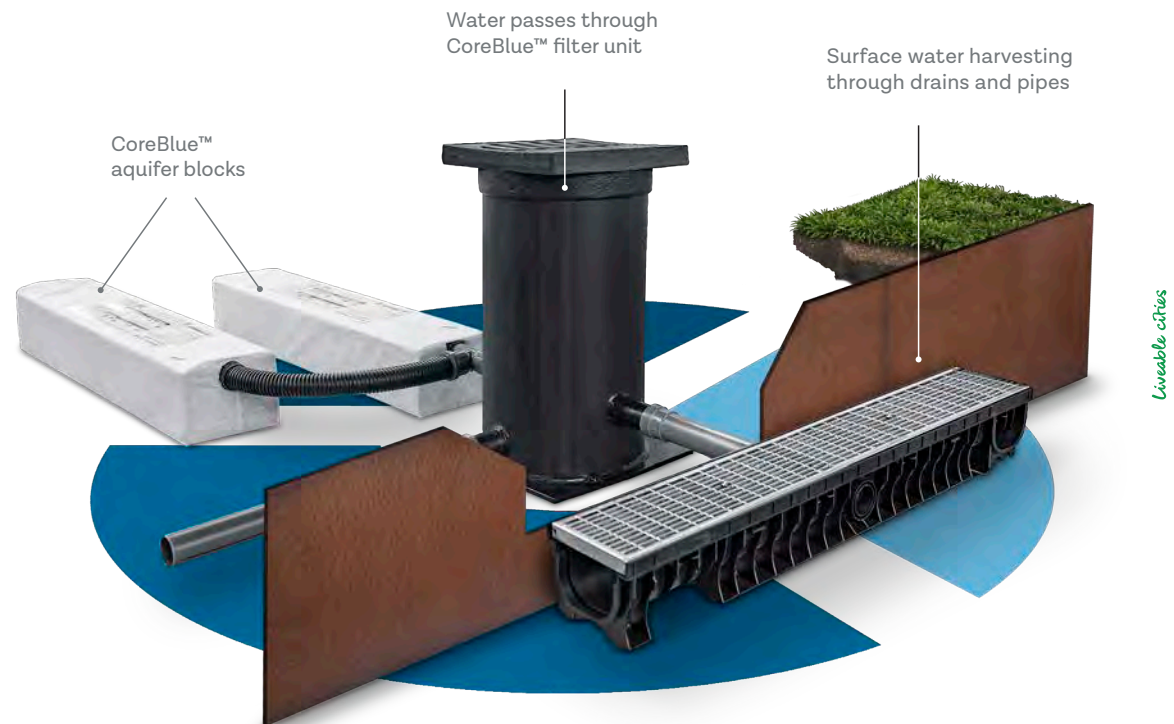

Passive irrigation with CoreBlue™

For passive irrigation, rainwater is typically directed from larger impermeable areas to smaller rainbeds, where vegetation benefits from the water.

The **CoreBlue™** system provides passive irrigation and is often incorporated into Contrast Freestyle™ planters to optimize growth conditions and manage surface water from surrounding areas or rooftops.

The **CoreBlue™** aquifer blocks function as underground water storage reservoirs, releasing water to the plants through natural capillary action.

Liveable cities

Materials and colors

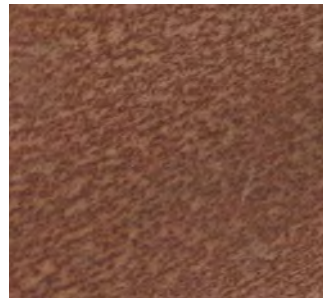

Contrast Freestyle™ is made of steel and is available with five different surface finishes. The material is 3-8 mm thick, with thickness increasing along with the edge height.

Wood

Thermo-Ash

Thermo-Pine

Durable, sustainable, and chemical-free

Our wood cladding is produced in collaboration with Thermory, a world leader in the development and production of thermally modified wood. We have selected Thermo-Ash and Thermo-Pine as our preferred wood types, but other options are available upon request.

Thermal modification is a natural way to strengthen wood. Using only steam and heat, each board is treated through a controlled, chemical-free process that removes all moisture and pests. Unlike chemical treatments, this process enhances the wood throughout, not just on the surface. The result is boards that are exceptionally durable, uniform, and easy to work with.

All wood from Thermory is sourced from sustainable forests in Europe and North America.

From concept to completion

Simply share the details with us—we'll design and produce a custom solution tailored to your project, delivered as a complete package.

**Do you want to know more about
Contrast Freestyle™?**

Send an email to info@milford.dk
or call us at **(+45) 44 97 10 99**

1

Schedule a meeting

Arrange a meeting and tell us about your project, vision, and requirements.

2

We assist with drawings

Our tech team is ready to bring your project to life. We assist with drawings and provide guidance on implementation, accessories, and design.

3

Approval and pricing

Once the design is approved, we'll provide a quote that can be used in the bidding process.

4

Consultation and installation

We work closely with the contractor throughout the entire process, providing guidance to ensure your project is completed in the best possible way.

We create liveable cities
where people feel happy,
healthy and safe
